

Dr. RAJ KUMAR

Date of birth: 31/01/1994 | **Nationality:** Indian | **Phone number:**

(+886) 958469963 (Work) | **Email address:** rajkumar31894@gmail.com |

WhatsApp Messenger: +91-9709776521 |

Address: Rom no. 309, Institute of earth science, , 128, academia Road Section 2, Nangang, Taipei, 115201, Nangang, Taiwan (Work)

● ABOUT ME

I am Dr. Rajkumar, an accomplished professional holding a Ph.D. in the specialized domains of seismology and space geodesy. My doctoral research, titled "Unraveling Geodynamics and Earthquake Hazards in Northeast India Using Seismo-Geodetic Data," serves as a testament to my proficiency in utilizing advanced techniques for the analysis and interpretation of intricate seismic and geodetic data. Motivated by a fervent desire to comprehend the nuances of Earth's dynamics, I have made significant contributions to unraveling geodynamic processes and understanding earthquake hazards, particularly in the unique context of Northeast India. With a robust foundation encompassing both theoretical knowledge and practical applications, I bring to any professional setting a distinctive skill set and a wealth of insights within the fields of seismology and space geodesy. During my Doctoral studies i have been awarded by the Inspire fellowship from the DST.

● EDUCATION AND TRAINING

07/2011 – 06/2014 Delhi, India

B.SC (H) PHYSICS Hindu College, University of Delhi

Website www.du.ac.in | **Final grade** 71.36%

07/2014 – 06/2017 Dhanbad, India

M.SC TECH IN APPLIED GEOPHYSICS IIT(ISM) Dhanbad

A method based on the concept of Enhanced Local Wave number technique - a model independent approach, has been developed to interpret EM anomalies. An equation involving only two unknown source parameters, viz., horizontal location and depth has been presented. The nature of the causative source has been determined by computing structural indices based on these parameters.

Thesis Interpretation of electromagnetic anomalies by enhanced local wave number technique

04/2018 – 04/12/2023 Dhanbad, India

PHD IIT(ISM) Dhanbad

The thesis embarks upon an important study related to the earthquakes caused by active faults in the Northeast Himalayan region of India. The primary focus of the study is to estimate the seismogenic depth of active faults in the region. This is achieved by implementing a dense network of seismic data. The work entails calculating the coupling ratio and sleep deficit for seismic hazard assessment of the region of study. This is achieved by using an inversion technique that translates geodetic displacement data into a unified analytical window. The investigation of tectonics in the north-eastern Himalayan region includes a thorough understanding of parameters like stress analysis, kinematic implications, and interseismic deformation. The seismicity of the region is understood through the application of a focal mechanism solution and GPS measurement provides new insights into the study of the seismotectonic characteristics of North East India. Thus my doctoral work provides new insights into the seismotectonic characteristics of Northeast India,

Thesis unravelling geodynamics and earthquake hazards in the northeast himalayas using Seismo-geodetic data

● **HONOURS AND AWARDS**

2011

Inspire Scholarship – Department of Science and Technology (GOI)

2017

Inspire Fellowship – DST(GoI)

I have been awarded by the DST Inspire Fellowship for a period of 5 years.

● **WORK EXPERIENCE**

06/2018 – 08/2023 Dhanbad, India

DST INSPIRE FELLOW IIT(ISM)

During my thesis at NCS MoES Delhi, I adept at handling and analyzing both seismological and geodetic data, showcasing proficiency in these domains. In addition to these capabilities, I have also worked extensively with Insar data. Using the GMTSAR software, I processed Insar data and generated time series using SBAS, showcasing a comprehensive skill set in data processing and analysis.

● **SOFTWARE KNOWLEDGE**

Software Knowledge

Seisan, ISOLA, MATLAB, Stressinverse, Coulomb, GAMIT-GLOBK, TDEFNODE, GMTSAR (InSAR data processing and time series analysis) SBAS

PROJECTS

Seismological and Space-geodesy data analysis

Adept in formulating and executing intricate methodologies to leverage seismological and GPS data, effectively deciphering geodynamic phenomena and seismic hazards. Possessing a proven track record in meticulous data collection, rigorous analysis, and insightful interpretation, adept at synthesizing diverse datasets to extract valuable conclusions Proficiency in establishing seismological and GPS observatories enhances the ability to contribute to a holistic understanding of intricate geophysical processes, particularly in intricate terrains—making an invaluable contribution to postdoctoral research endeavors.
